Addressing the Challenges of Arctic Navigation

Vessels require reliable tracking and ship security alerting systems, wherever they choose to operate in the world. With the opening up of the North Sea Route and the new Polar Code, more and more vessels are venturing into the Arctic region. Relying on its proven track record in these areas, CLS developed Shiploc Arctic to offer its customers the most effective certified SSAS system with a contained price.

Shiploc, IMO compliant

Shiploc uses the Iridium satellite constellation to give truly worldwide coverage, including the Polar Regions. CLS' Shiploc terminal is compliant with the SOLAS XI-2/6 IMO regulation and has been designed to operate in harsh environment.

Shiploc, your day-to-day partner for SSAS alert management

With Shiploc Arctic, there is no limit to the number of alerts recipients: you can customize it indefinitely. Which means, there is no need for a technician to go aboard to correct a misspelled email address: Shiploc.com gives you control. With Shiploc, you have the freedom to manage incidents, start tests or respond to alerts from any device, anytime, anywhere. Using Shiploc, you can customize test profiles and test notifications to comply with your company's security policies and best practices.

Shiploc terminal specially designed for harsh environnement including Arctic sea routes
